EDUCATION

MSc in Computer Science and Engineering (MEIC) – Instituto Superior Técnico, University of Lisbon

Sep 2026 – present · Focus: Distributed Systems

BSc in Computer Science and Engineering – NOVA School of Science and Technology (FCT NOVA)

Sep 2023 – Jul 2026 · Final grade 15/20

Relevant courses: Object-Oriented Programming, Programming Languages, Software Engineering, Theory of Computation, Computer Graphics, Distributed Systems.

EXPERIENCE

Software Engineering Intern – TECMIC (fleet-management platform XTran)

Mar 2026 – Jul 2026 · Lisbon, Portugal

- Built the Configurable Dashboards module of a multi-tenant fleet-management platform (C#.NET, SQL Server, NHibernate, jQuery, Highcharts), letting clients create drill-down dashboards with aggregated metrics without developer involvement.
- Benchmarked OLAP storage engines (SQL Server rowstore/columnstore, ClickHouse, DuckDB) over 10M+ production rows using a custom .NET benchmark app; identified columnstore indexing as a low-cost change delivering up to 9x faster aggregation queries, adopted as the team's phased recommendation.
- Integrated 30+ Data Warehouse indicators (distance, fuel consumption, speeding, harsh braking, etc.) with strict per-tenant isolation; built a Miller-columns hierarchical selector from scratch and reversible FluentMigrator schema migrations with full backward compatibility.

PROJECTS

ModdedMindustry – github.com/ricpote/ModdedMindustry

- Modded version of the open-source RTS Mindustry (Java, ~20k-commit codebase) built for a Software Engineering course: added natural disasters, a weekly challenge mode, wave health bars and a trader character in campaign levels.
- Worked inside a large existing codebase (Gradle, multi-platform desktop/server/Android), applying software engineering practices: requirements, design, testing and version control in a team.

Illumination and Shading – github.com/a-narquel/Illumination-and-Shading

- Interactive 3D graphics application with Gouraud and Phong shading, multiple configurable light sources and full camera/projection control. JavaScript, WebGL.

UniRide – Carpooling platform for university students (48h hackathon)

- Real-time creation, search and management of shared rides. Node.js, Express, TypeScript, MongoDB, JWT, Google OAuth 2.0.

VOLUNTEERING

ExpoFCT – NOVA FCT open day

- Volunteer at the faculty's open day, presenting degree programmes and science/engineering activities to secondary-school students.

SKILLS

Languages: Java, C#, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks & tools: .NET, Node.js/Express, MongoDB, SQL Server, ClickHouse, DuckDB, NHibernate, WebGL, Git, Azure DevOps, Docker

Spoken languages: Portuguese (native), English (C1)
